

Structures effecting Hydrology

Structures built in the Hunter River estuary between 1801 and 1995 that effect hydrology include:

- 42 bridges
- 59 culverts
- 11 floodgates
- 57km drains
- 20km levees

(Ref: Williams et al, 2000)

Area of industrial land in the Hunter River estuary (about 990ha, with 310ha in the former BHP dump site)
